

ANANTH KAMATH

Ph: +91 79756 46956 | Email: ananthkamath916@gmail.com | Portfolio: GitHub Portfolio
LinkedIn: linkedin.com/in/ananth-kamath77 | GitHub: github.com/Ananthkamath00

PROFESSIONAL SUMMARY

Detail-oriented Cybersecurity Graduate with hands-on technical project and industry-aligned internship experience specializing in Identity & Access Management (IAM), application security, and cryptographic data protection. Proven experience designing and implementing Zero-Trust network and identity frameworks, multi-tier MFA authentication architectures, and secure web environments aligned with rigorous regulatory baselines such as HIPAA. Competent in conducting traffic analysis, implementing robust session controls, and building defensive layers to shield corporate assets from post-breach exploitation and network anomalies.

EDUCATION

Yenepoya (Deemed to be University)

BCA in Cybersecurity, Ethical Hacking, and Digital Forensics (In Collaboration with IBM)

Mangalore, India
July 2023 – July 2026

Sri Rama Pre University College

Pre-University Course (PUC) in Science

Kalladka, India
June 2021 – May 2023

TECHNICAL SKILLS

- **Identity & Access Management (IAM):** Zero-Trust Architecture, Role-Based Access Control (RBAC), Multi-Factor Authentication (MFA), TOTP QR Provisioning, Step-Up Authentication, Federated Identity, Google OAuth 2.0.
- **Data & Application Security:** AES-256 Field-Level Encryption, Cryptography (Fernet Library), Immutable Audit Logging, Session Controls, Secure Cookies, Rate Limiting, Threat Mitigation (DDoS, SQL Injection, Session Hijacking).
- **Backend & Networking:** Python 3.10+, Flask, SQLAlchemy, SQLite, Gunicorn, Nginx, TLS 1.3, WebSockets, Flask-SocketIO, Packet Capturing, Incident Response, Defensive Security Frameworks.
- **Frontend & Tooling:** HTML5, CSS3, Vanilla JavaScript, Jinja2, Version Control (Git, GitHub Systems), Code Validations, UI/UX Security Alignment.

PROFESSIONAL EXPERIENCE

IBM Innovation Centre for Education (ICE)

Cybersecurity Project Intern – Identity Framework For Healthcare

Mangaluru, India
March 2026 – April 2026

- Engineered a secure, production-ready healthcare identity platform layout prioritizing the systematic reduction of post-breach vulnerability metrics.
- Built multi-tier backend pipeline handlers managing third-party Federated Google OAuth 2.0 logins and mandatory QR-based dynamic code (TOTP) enrollment processes to enforce continuous identity verification.
- Enforced robust database-layer encryption schemes utilizing cryptographic layers to fully defend Protected Health Information (PHI) at rest, mitigating risks associated with unauthorized data exposure.
- Supported end-to-end vulnerability assessments and actively monitored system components to align technical deployments with established regulatory and compliance parameters.

Yenepoya Institute of Arts, Science, Commerce and Management

Cybersecurity Intern - DDoS Mitigation System

Mangaluru, India
September 2024 – November 2024

- Engineered a robust DDoS mitigation system by analyzing live network traffic logs and packet capturing sequences to detect anomalies, suspicious patterns, and potential infrastructure vulnerabilities.
- Developed statistical baseline threshold models to buffer enterprise network channels against high-volume volumetric DDoS vectors, significantly improving environment uptime.
- Collaborated on defensive security methodologies, digital forensics, and proactive monitoring simulations to refine incident response playbooks for time-critical operational settings.

TECHNICAL PROJECTS

AegisPass – Secure Local Password Management Architecture

2026

Lead Developer / Code Repository

- Designed and implemented a secure local-first credential management utility engineered to run safely within isolated client-side environments without relying on external server dependencies.
- Utilized a robust, key-derived master password scheme paired with high-performance encryption modules to guarantee zero-knowledge storage of sensitive consumer secrets at rest.

- Enforced strict runtime error parameters, data sanitization models, and string processing constraints to protect the local storage layer from code execution vulnerabilities and environment container escapes.

Glorius Gems Web Development Project

2026

Full-Stack Web Developer / Code Repository

- Developed a production-facing e-commerce web interface architecture optimized for scaling inventory operations across gold and diamond retail management systems.
- Integrated efficient backend logic handlers to maintain data state consistency and managed the repository structure utilizing professional version control architectures.

Future City – Urban Planning App Framework

2025

Hackathon Contributor / National Code Sprint Hackathon

- Contributed to and publicized an innovative AI-powered municipal design framework tool using optimization models for smart city public expansion, placing and scaling layouts dynamically.
- Collaborated with a multidisciplinary engineering team during an intensive sprint to design, validate, and present algorithmic scaling models under strict competition timeline constraints.

CERTIFICATIONS & JOB SIMULATIONS

- **Google Cybersecurity Professional Certificate** – Credential Verification
- **Managing Security and Administration in SAP Analytics Cloud** – SAP Course Completion – Credential Verification
- **Deloitte Australia Cyber Job Simulation** – Forage Verified Competency – Official Certificate

AREAS OF INTEREST

Identity and Access Management (IAM), Application Security, Security Engineering, Defensive Security, Incident Response, Cloud Security, Infrastructure Resilience, Healthcare Data Security, Digital Forensics.
